

## Pediatric Power Program

***“A hundred years from now, the world may be different because I was important in the life of a child”.***

More than simply a mantra, this is our mission at ATG Rehab when it comes to helping children. While all of our customers are of paramount priority at ATG Rehab, none are as rewarding as our pediatric clients, their caregivers and the clinicians who serve them.

“Mobility” means something entirely different for pediatric clients. For children, mobility is key to exploration, play, sensory input, and learning. Independent mobility is critical to the development of visual skills, early learning, and developing a sense of independence... critical for the future foundation of quality of life.

Our Pediatric Power Program offered only by ATG Rehab is unprecedented among complex equipment providers for our personalized service, dedication, experience and comprehensive approach we give our customers. With safety at the core, our evaluation begins with an advanced technology product simulator. Our simulator allows a child equipped with a manual wheelchair, to safely and effectively explore the experience, new mobility opportunities, and adventures a power chair affords, without leaving the safety of their current chair. No one is better equipped to understand or address a child’s individual and unique needs than our highly trained RTS and MED Certified personnel.

ATG Rehab is pleased and proud to offer the expertise of working with the national expert pediatric clinician, Michelle Lange, OTR, ABDA, ATP with over 20 years experience in the area of assistive technology to help us better serve children.

Our Pediatric Power Program is more than simply a “program”. It is a promise of a productive and positive future for pediatric clients, caregivers, and clinicians coast to coast.

The growing ATG Rehab network of locations from Connecticut to California offers national strength and size while maintaining critical, individual and localized focus and service.
